International Fulfillment & Inbound Reconciliation

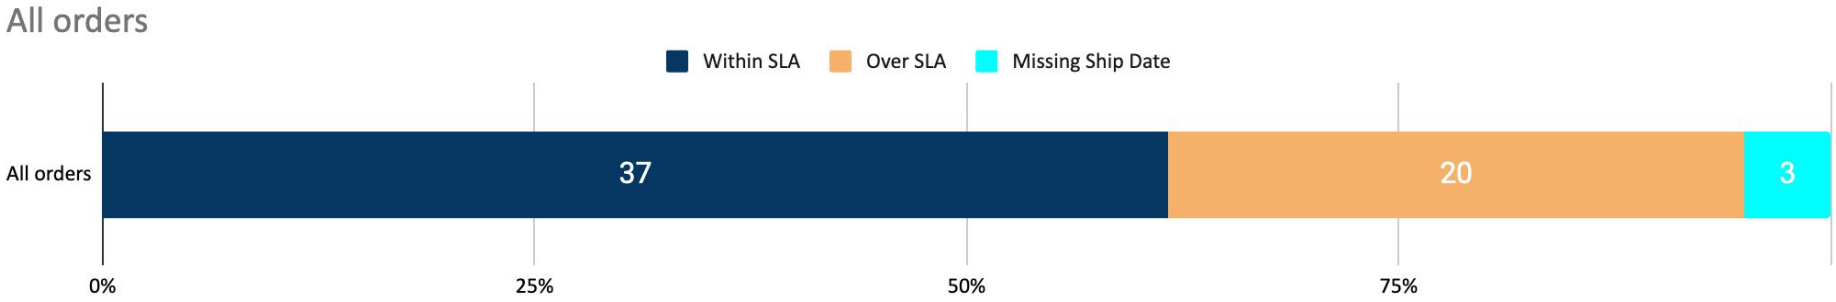

SLA Performance | Inbound reconciliation | Escalation | Prioritization

Prepared by: Antonio Guerrero · October 2026

1. Fulfillment SLA Performance

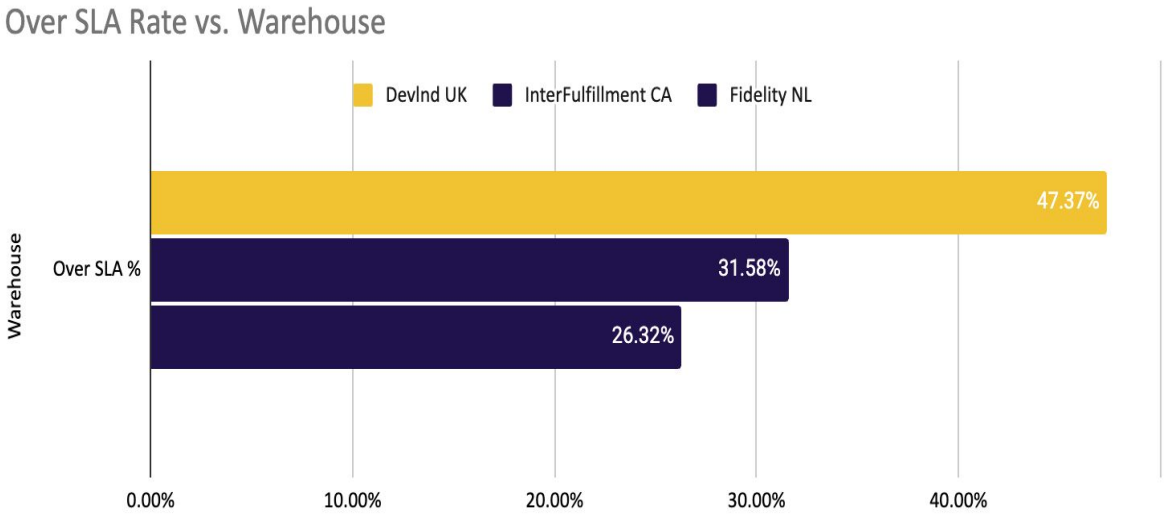

35% of orders with recorded shipping dates exceeded the two-business-day SLA

20 of 57 orders with recorded Ship Dates breached the SLA; 3 additional orders require shipping-date verification.

2. Warehouse Performance & Operational Risks

Devlnd UK has the highest SLA breach rate, with 47% of dated shipments exceeding the two-day target

Highest SLA risk — Devlnd UK

9 of 19 orders with recorded Ship Dates exceeded the two-business-day SLA (47.4%).

Delays are not isolated to one carrier

Multiple warehouse/carrier combinations at Devlnd UK show SLA breaches. This warrants investigation of warehouse processing and handoff operations.

Two of four inbound POs have unit shortages, totaling eight missing units

Both discrepancies involve four missing units despite matching pallet counts.

Exceptions

PO-FI-1022: -4 units
PO-DE-11056: -4 units

Investigation required

Pallet counts match; unit quantities differ

3. Warehouse escalation email: request evidence and a deadline

A documented SLA breach requires shipment verification and a time-bound warehouse response

SUBJECT ORD-0007 – SLA Breach and Shipment Verification

Hi Fidelity NL Team,

Order ORD-0007 shipped four business days after the order date, exceeding the two-business-day SLA.

Our records show 1 of 2 units shipped. Carrier acceptance has not yet been verified.

Please provide:

- Reason for the delay and actual warehouse dispatch timestamp
- Carrier acceptance scan or tracking evidence
- Explanation of the missing unit and proposed corrective action

Please acknowledge within two business hours and provide an initial update by end of business day.

Without an update, we will escalate to the warehouse operations lead.

Thank you,
Operations Team

WHY THIS LANGUAGE

01 States the measured SLA breach and unit shortage, without speculation.

02 Requests proof of carrier handoff rather than assuming it occurred.

03 Defines response timing and a clear escalation path.

3. Freight forwarder: investigate, do not assign blame

A four-unit inbound shortage requires shipment documentation before assigning responsibility

SUBJECT Freight Forwarder Investigation | PO-FI-1022

Hi Team,

PO-FI-1022 shows 96 received units versus 100 expected: a shortage of four units.

The warehouse reports matching pallet counts, but a unit-count mismatch with the packing list.

Please share the following records:

• Commercial invoice and packing list

• Bill of Lading (BOL), signed delivery receipt and POD

• Pallet count, handover and available inspection/shortage reports

Please confirm quantities loaded at origin and any transport or delivery exceptions.

Please provide an initial response by the end of the next business day.

We will compare these documents with receiving records before determining resolution.

Thank you, Operations Team

WHY THIS LANGUAGE

01

Quantifies the discrepancy precisely.

02

Requests documents spanning origin, transit and delivery.

03

Seeks factual confirmation before assigning responsibility.

3. Client update: communicate verified facts and actions

Proactive client communication builds trust through verified findings and clear next steps

SUBJECT Operational Update – Fulfillment and Inbound Discrepancies

Hi Team, I would like to share an update on our latest fulfillment and inbound reconciliation review.

Fulfillment: Of 60 orders, 37 met the two-business-day SLA and 20 exceeded it.

Three orders have missing Ship Dates and require verification before SLA classification.

We are reviewing delays, dispatch records and corrective actions with warehouse teams.

Inbound: Two of four POs have recorded shortages:

- PO-FI-1022: 4 units short
- PO-DE-1056: 4 units short

Pallet counts match, but unit counts differ from packing lists.

We are reviewing receiving reports, packing lists and delivery evidence.

We will share a follow-up once the investigation confirms findings and next actions.

Thank you, Operations Team

WHY THIS LANGUAGE

01

Separates confirmed breaches from unclassified records.

02

Discloses shortages without prematurely assigning fault.

03

Commits to an evidence-based follow-up, not an invented resolution date.

04. Prioritize customer impact, irreversible risk and cutoffs

Five requests arrive at 9:00 a.m.; acknowledge quickly, then execute based on risk and timing.

Rank	Request	Immediate action
01	Client: 49 potentially delayed orders	Acknowledge; commit to an update; verify exceptions
02	Warehouse: PO short four units	Hold closure; investigate discrepancy
03	Carrier: tomorrow pickup	Send required shipment details before cutoff
04	Finance: invoice backup EOD	Prepare and deliver supporting documentation
05	Historical report next week	Schedule after urgent operational work
